TYPES OF TESTS

Your audiologist will recommend the best testing option for your baby. Both tests are safe, gentle and can be completed while your baby sleeps in your arms.

1

Otoacoustic Emissions (OAE)

An OAE checks how your baby's inner ear responds to sounds by measuring a tiny echo it produces.

2

Auditory Brainstem Response (ABR)

An ABR measures how your baby's hearing nerve responds to sounds, using small sensors while your baby sleeps. We perform *natural sleep* ABRs only.
